Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Busi et al. (US 2003/0067871) in view of Gonda (US 2003/0043736).

1. Regarding claims 1-2, 5-9, 12-16 and 19-21, Busi discloses a method of handling miscabling defects in a node in a RPR network (fig. 3). The method comprises detecting a miscabling defect at a node and notifying neighboring nodes of a signal failure (paras. 24-26 and 28; para. 72). Further regarding claim 15, the method is implemented in logic (para. 5; note: 802.17 standard).
2. However, Busi does not disclose setting a state of a miscabling parameter in the node. Gonda discloses setting a miscabling parameter in a protection state machine (fig. 3, item 301C; fig. 1; para. 17; para. 42, last 3 lines). Therefore, it would have been obvious to maintain a state

parameter in the invention of Busi in order to retain a previous status for future use as is known in the art (Gonda, para. 23; note: state registers).

3. Regarding claims 4, 11 and 18, the packet is a topology protection frame (para. 45; note: keep alive message).

Allowable Subject Matter

Claims 3, 10 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
